## If asked, say what's true

1. "Denies" 2015 VA, 2018 Victory, 2023–24 Starlite; claim 5/19, Cherie 6/17 → what was going on then
2. Starlite intakes 2022–25 ("use from ~18," "anx/dep at 18," "opioids at 25" ≈ 2014–15) = history they recorded, not pre-service treatment · Victory 2018: "opioid pills 18, cocaine 19" → what I recall
3. 8/4 record: "accidental," "antihistamine poisoning," gabapentin 1200 + other meds, "no SI"; opiates negative, no kratom test → what happened
4. SI "every day" (6/17) vs denials Apr–May 2026 → what was true then
5. Mountain: 6/26 vs 6/30; agreement gives no reason → why it ended
6. Early-June relapse vs Cherie "currently sober" 7/9, 7/16
7. One night vs a year of harassment → what happened
8. Ankle: statement says service-connected 10%; others say tinnitus only → what I know · 2011 vs 2012
9. "Childhood trauma" (5/15 Recover eval) vs "pretty good childhood" (Starlite) → what I recall
10. Nick (corrected 10/13): college 2007–09 before service → where? · pre-service depression/therapy = my psychiatrist ~19 · unemployment: did I file? (his statement no longer says so)
